ZEN ELEVATOR CO.,LTD.
HOME ELEVATOR

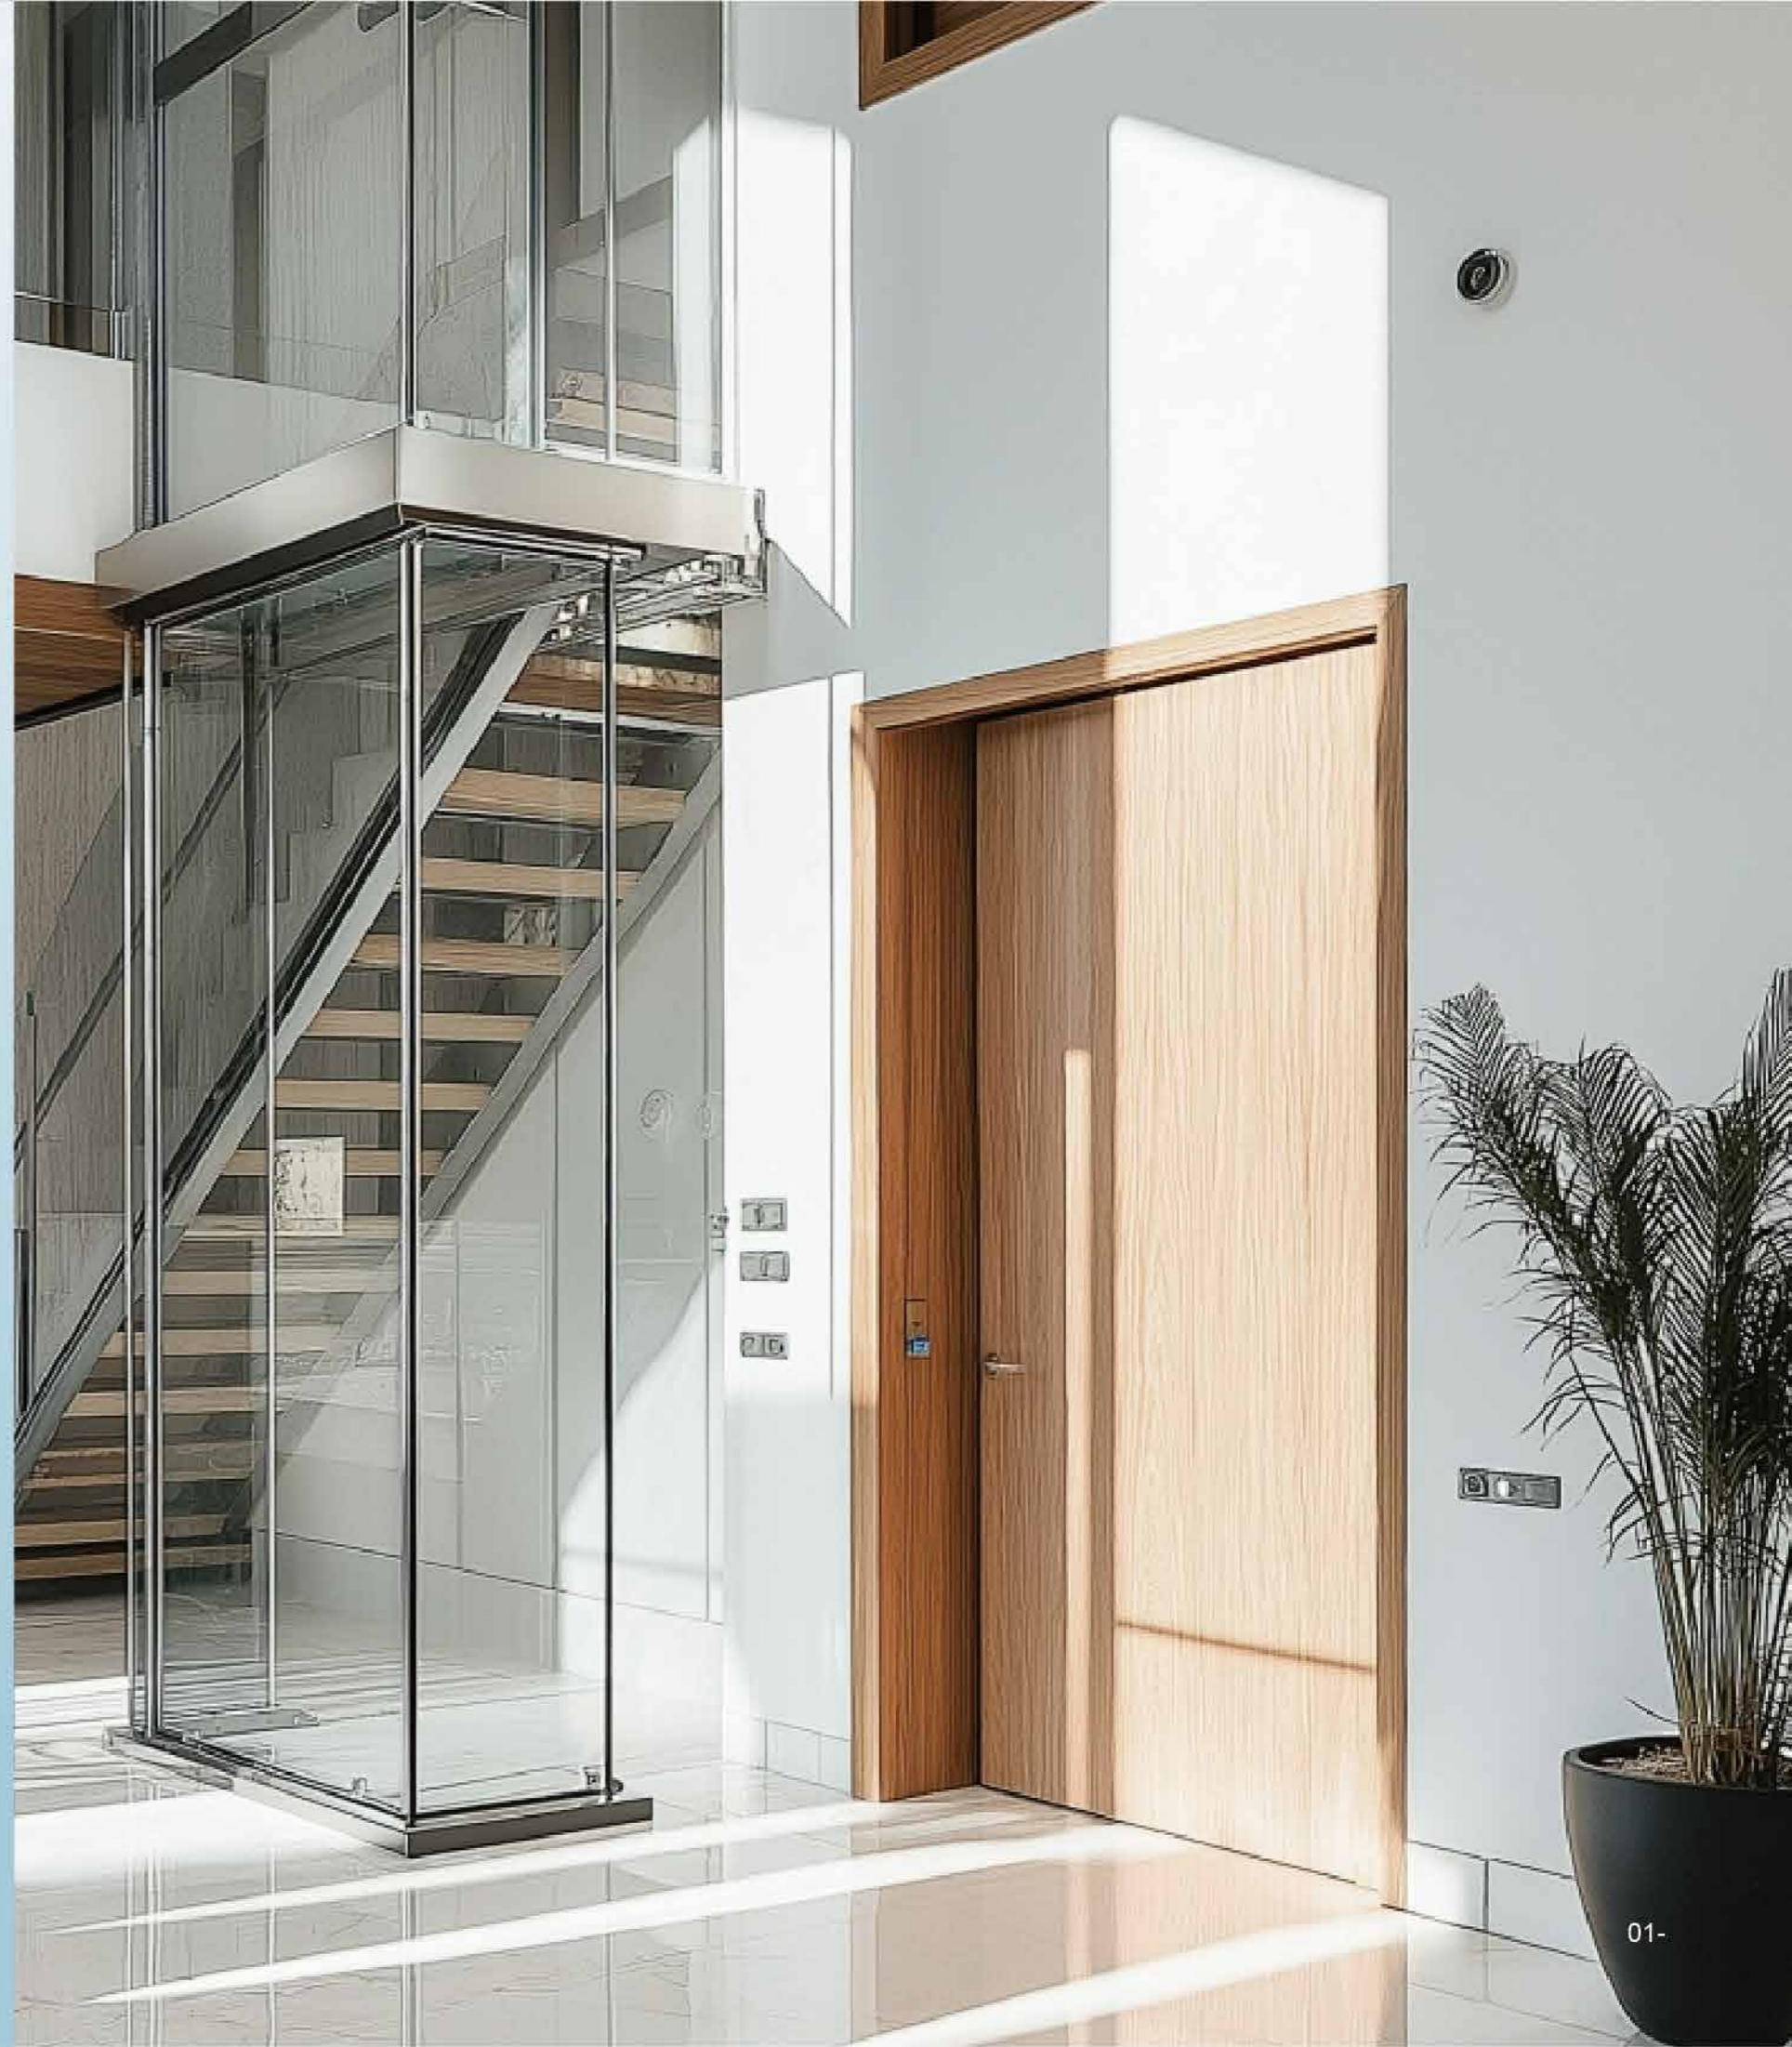

COMPANY INTRODUCTION

ZEN ELEVATOR was inspired by the wisdom of the ZEN masters with more than 20 years professional industry experience, blending oriental philosophy with smart technology to create a seamless and harmonious vertical transportation experience.

The name 'ZEN' embodies its core values: 'Z' for Zenith, representing the brand's pursuit of excellence; 'E' for Equilibrium, symbolizing balance and smooth operation; and 'N' for Nirvana, reflecting the goal of peaceful ride. Rooted in simplicity, reliability, and innovation, ZEN Elevator redefines modern mobility, delivering technology that moves with both safety and peace.

ZEN ELEVATOR as the group elevator brand of leading OEM solution for the big brands with the comprehensive ability to provide the design and manufacture of complete elevator, escalator, moving walk as well as the main parts and modernization solutions.

OPEN STATE OF MIND ELEGANT LIFE STYLE

ZEN brand,
We specialize in creating high-end
home elevators.
Born noble, excellent quality sets an
example; Cleverly crafting the beauty of
every inch, infusing the charm of
technology.
ZEN Home Elevator
Redefine the quality of villa life.

SECURE AND ECO HOME

Disc dual brake design system, for operational faults
Security protection without any leakage (standard)

Faced with power outages
Emergency rescue will never trap anyone (optional function)

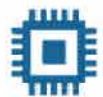

Faced with sudden fire incidents
One click response of fire switch (optional function)

Facing entry and exit safety
Authoritative authentication technology provides layered protection (standard)

INTELLIGENT HOME ENJOYMENT

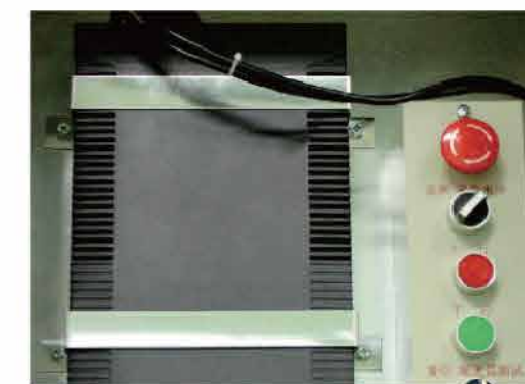

Intelligent control(standard)

Electric brake release
(standard function)

Automatic detection, intelligent
warning
(optional function)

One click external communication,
efficient interoperability
(optional function)
The COP is equipped with a one key
communication button, which can pre-set
multiple sets of phone numbers. In case of
emergency, personnel in the car can
automatically call the preset number by
pressing the button, and the contact
person can be connected in the first time.

Silent contactor (standard)

Smart IoT, leading technology
(optional function)

Automatic repair, remote manage
(optional function)

ELEGANT LIFE HOME

Intelligent switching, creating energy-saving space (standard)

The energy-saving function of the car roof fan and car interior lighting automatically cuts off the car interior lighting and fan when there is still no operating command after the set time, making it more energy-efficient.

Green environment, Ideal low-carbon lifestyle

Silent design, nurturing a harmonious atmosphere

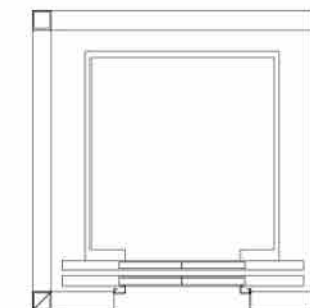

Diversified design, Unleashing the myriad possibilities of life

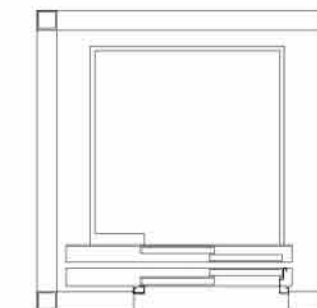

Starting from enhancing the user experience, home elevators offer door opening options such as side open, center open, and hand doors, which are suitable for various types of building structures.

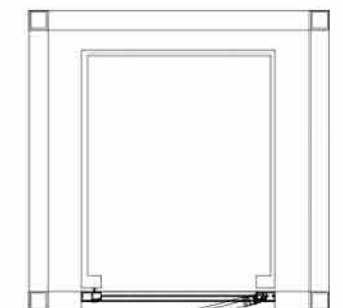

- Permanent magnet synchronous gearless traction machine, free from oil pollution, with an energy-saving rate of up to 409%;
- Car green automatic lighting system, capable of autonomously sensing the status of passengers inside the car and automatically adjusting LED lighting;
- The car air ventilation device continuously circulates and replaces the air inside the car, keeping the car air circulating and fresh at all times.

TRACTION HOME ELEVATOR

Carefully consider the elevator needs of the whole family, young and old
Specially designed for intimate family life,
with technical support from multiple aspects
such as safety, comfort, health, and create a
safer, lighter, and more enjoyable quality of
life for family members.

STEEL BELT HOME ELEVATOR

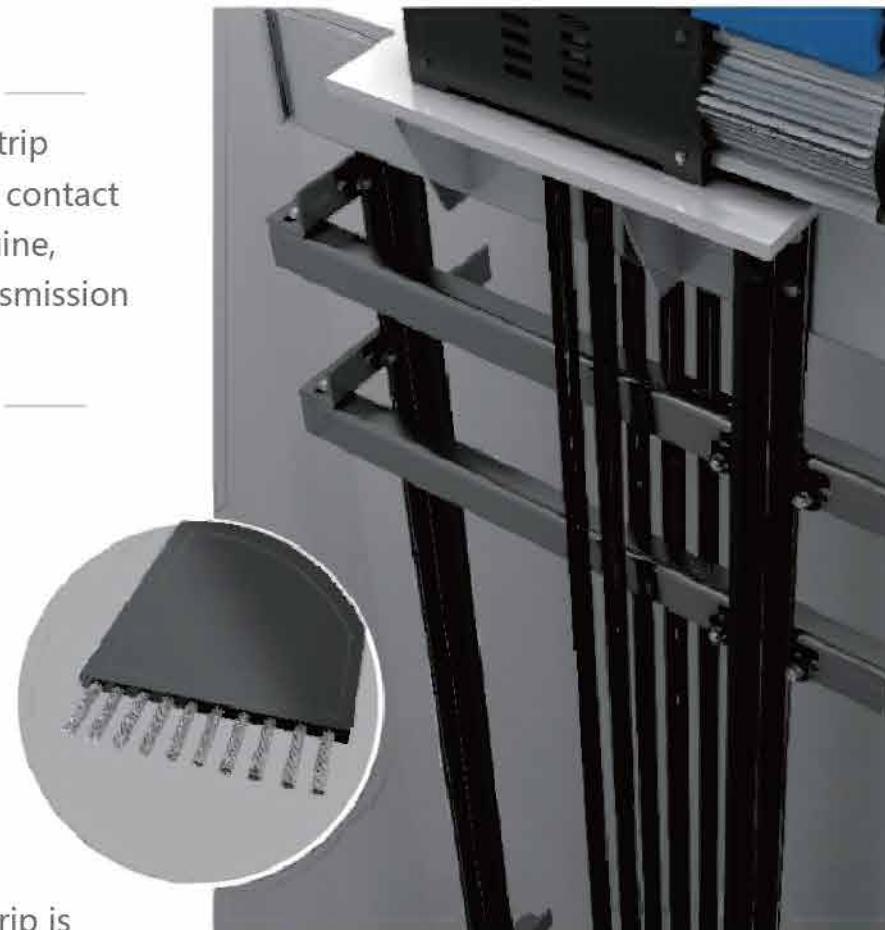

Replacing traditional steel wire ropes with flat composite steel strips, comprehensively optimizing the overall structure of the machine, greatly reducing the demand for top floor height and bottom pit depth, achieving flexible entry and installation, and saving more building space for users.

Efficient

The flat composite steel strip significantly increases the contact surface with the main engine, effectively improving transmission efficiency.

Quiet

The surface of the steel strip is coated with polyurethane enzyme technology to enhance smooth operation and reduce noise.

Durable

Compared with traditional steel wire ropes, the service life is extended by 2-3 times.

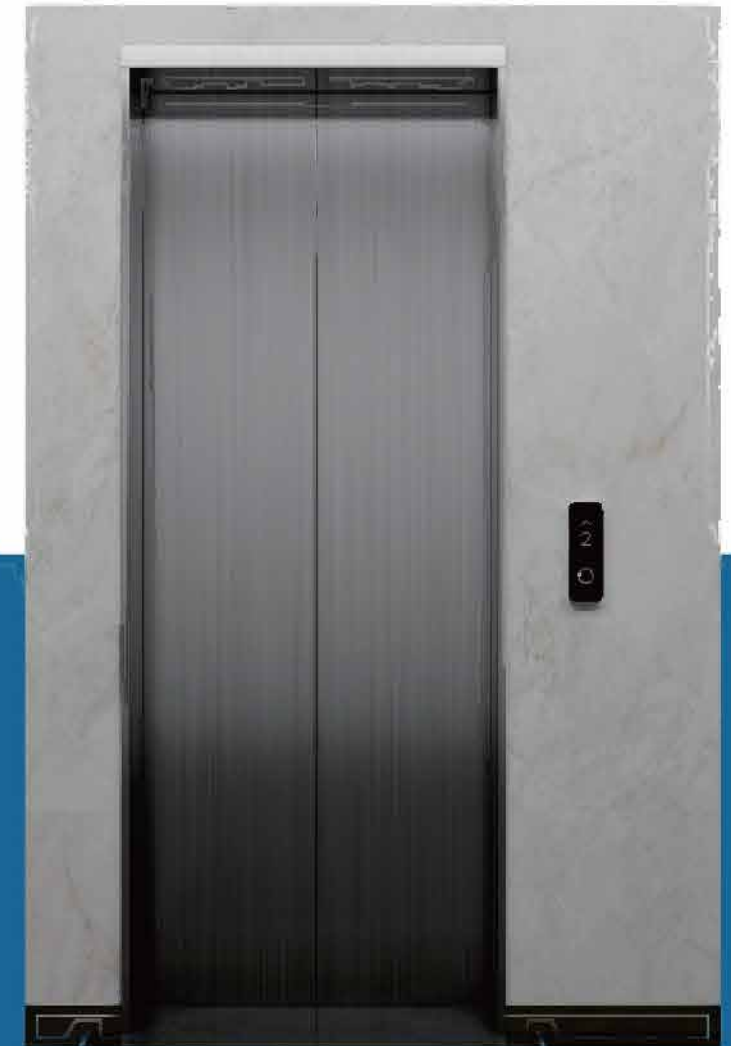

Deftly

Compact optimization of the host, reducing its size by 70% compared to traditional hosts, enhancing space value.

CAR DECORATION

Standard

ZEN-2402

Ceiling: Hairline stainless steel with flat lamp

Rear wall: Hairline stainless steel

Side wall: Hairline stainless steel

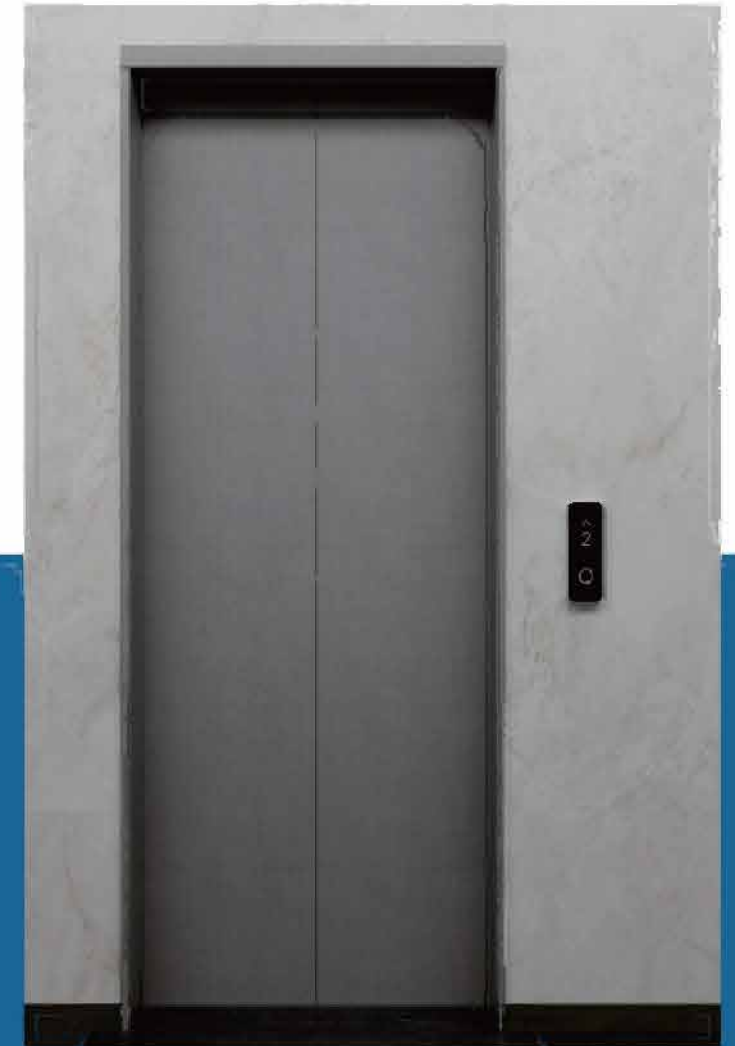

Front wall: Hairline stainless steel

Car door : Hairlline stainless steel

Floor : PVC

CAR DECORATION

Optional

ZEN-2403

Ceiling: White spray-painted steel with strip lamp
Rear wall: Both sides Laminated steel VS004 with middle Laminated steel VS006 with Black Titanium trim and LED lamp
Side wall: Coated with film VS004 and Black Titanium trim
Front wall: Laminated steel VS006
Car door : Laminated steel VS006
Floor : PVC

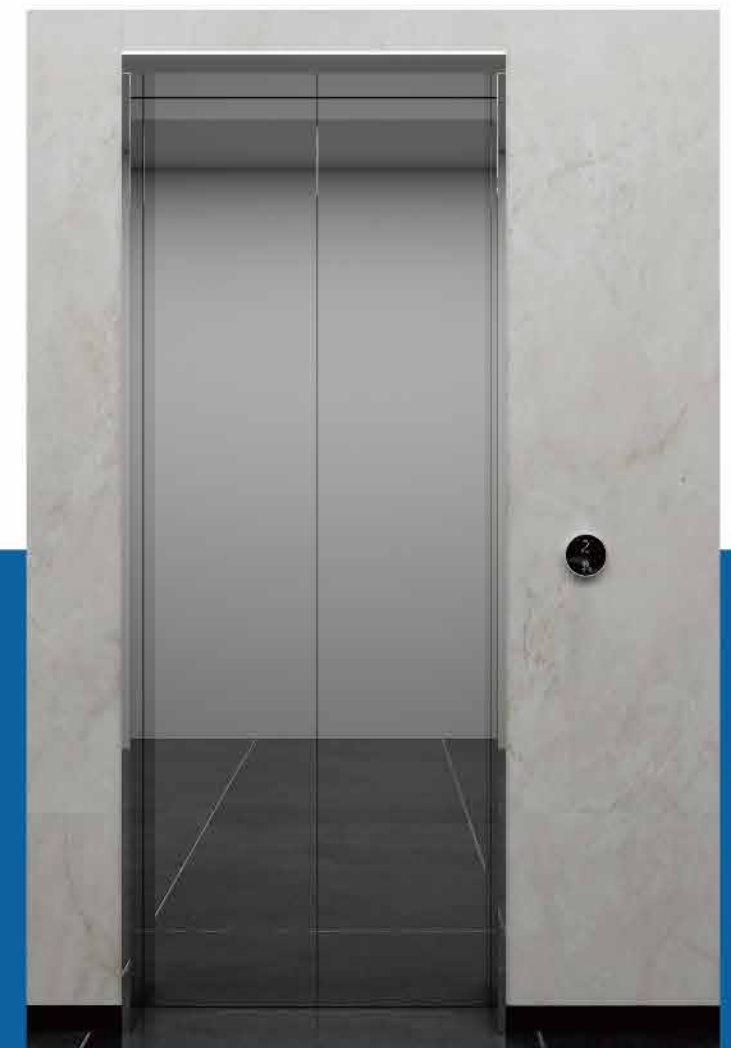

CAR DECORATION

ZEN-2404

Ceiling: Mirror stainless steel with LED lights

Elevator function

Standard		
NO	Function	Description
1	Complete selection function	Automatic operation or driver status, during the operation of the elevator, it responds to both internal calls and external call button signals, providing any service.Passengers on the floor can call the elevator by registering for up and down call signals.
2	Floor display settings	The system allows for the use of any combination of numbers and letters in each layer, making it convenient for special situations.
3	Idle return to base station function	In automatic operation mode, if there are no internal commands or floor calls after the set time, the elevator will automatically return to the designated parking station to wait for passengers.
4	Light curtain signal self diagnosis	When there is something blocking the middle of the door during the closing process, the light curtain protection will activate, and the elevator will turn to open the door, but the light curtain protection will not work during firefighting operations.
5	Low speed self rescue function	When the elevator is in a non maintenance state and not stopped in the leveling area, as long as it meets the safety requirements for operation, the elevator will automatically run at a slow speed Go to the flat area and then open the door.
6	Fault data recording	The system can automatically record detailed information when faults occur, improving maintenance efficiency.
7	Repeat door closing function	After the elevator has been continuously closed for a period of time, if the door lock has not been closed, the elevator will automatically open the door and then repeat the closing process.
8	Door opening time setting	The system automatically identifies different states such as summoning door opening, command door opening, door protection door opening, delayed door opening, etc. according to the set time Maintain the opening time.
9	Overload protection function	When the load inside the elevator exceeds the rated load, the elevator will sound an alarm, not close the door, and stop running.
10	Car lighting and energy-saving fans	When the set time is exceeded and there is still no operation command in the car, the power supply for lighting, fans, etc. in the car will be automatically cut off.
11	Elevator locking function	In automatic operation mode, when the lock switch is activated or the set lock time is reached, the elevator responds to all internal calls and returns to the lock base station, Stop the automatic operation of the elevator, turn off the lighting and fans inside the car.
12	VIP service function	Priority direct access to VIP destination floors, providing VIP services for special individuals.
13	Error command deletion function	For in car elevator calls, passengers can cancel incorrectly registered commands by continuously pressing the command button twice.
14	Car prohibition function	Real time monitoring of elevator operation status, if overspeed occurs, immediately stop running and brake the elevator.
15	Prioritize personnel function	The integrated control system automatically classifies the types of faults, and prioritizes returning to the leveling floor to open the door and release personnel if they meet the conditions for safe operation.
16	Electric brake release	In the event of an elevator malfunction, the main brake can be opened by pressing the release button, allowing the elevator to level at low speed for rescue.

Optional		
NO	Function	Description
1	Silent contactor	Using silent contactors to ensure that the sound of elevator operation is minimized, and the control cabinet layout is located close to the bedroom or where customers are sensitive to sound It is recommended to choose the appropriate option.
2	firemans switch board	In case of a sudden fire, press the fire switch and the elevator will automatically return to the pre-set floor.
3	Arrival bell	After the elevator reaches the designated floor according to the passenger's request, a prompt sound will be emitted.
4	Voice station announcement	During the operation of the elevator, it automatically reports the direction of travel and the upcoming floor to passengers.
5	IC card function	Passengers must hold a card to reach floors that require authorization to enter.
6	Push-to-talk	Press the one key distress button on the control panel to connect the designated contact person through an external phone line, soothing the trapped person in the car and accelerating rescue efforts Personnel response time. A telephone line needs to be reserved on site to the control cabinet (to be borne by the owner).
7	Power outage rescue function	Built in emergency power supply, the system activates the emergency power supply for low-speed self rescue in case of power outage.
